

## Smart Asset Visibility Solution

In this era of global supply chain and large contract manufacturing, visibility across production lines is a challenge. The ability to drill down to find the spare and idle equipment and proactive maintenance of equipment on the production line is vital. This is critical while designing a new production line to identify idle or spare equipment whether can be reused or retrofitted.

-  **Smart Asset Visibility Solution:** Targeted at hi-tech manufacturers, aims to give a unified, real time view of the production lines including the way the equipment is organized on a production line within various stations.
-  **360 degree view of production line:** Ability to identify existing equipment for building new production line. The solution offers higher visibility to equipment status and location.
-  **Access to real time data:** Integrated with S/4HANA system, the solution triggers action for asset status and tracks equipment health using Manufacturing Integration and Intelligence.

### Smart Asset Visibility Solution

With a growing need for effective supply chain management, it is essential to have high visibility of all the equipment and processes. Wipro's Smart Asset Visibility Solution, targeted at hi-tech manufacturers, is built on the HANA platform. The accurate information obtained from the system is supplemented with details on all the existing equipment along with their current availability status, count and health data (coming from Manufacturing Integration and Intelligence). This helps the customer retrofit/scrap/scale/transfer equipment and avoid misuse. By providing an inventory of all the equipment based on production line, the solution extends support to the production line design for the latest version and utilizes all the existing equipment.

#### Key features:

- Offers visibility of equipment status and location
- Tracks equipment health using MII
- Provides inventory of all the equipment based on production line

### Wipro's Smart Asset Visibility solution targeted at hi-tech manufacturers is built on the HANA platform.

- Identifies existing equipment for building new production line
- Integrates with S/4 HANA system to trigger action for asset status

#### Business benefits

- Cost reduction through improved utilization of equipment and saving on capital investment
- Avoid misuse of the equipment on contract manufacturer's premises
- Savings on maintenance cost with predictive maintenance
- Better equipment utilization by reducing unnecessary maintenance downtimes
